EPPCo EV Charging Named Founding Member of the TAMPAtwenty Highlighting Regional Leaders in Private Sector Growth

Boca Raton, FL – March 26, 2024 – EPPCo, a Tampa-based electric vehicle (EV) charging solutions provider, has been named a founding member of the TAMPAtwenty—a regional initiative within the Florida Private Company Index (www.PrivateCompanyIndex.com).

“We’re honored to be selected as a founding member of the TAMPAtwenty,” said Fred Knight, President of EPPCo. “We look forward to collaborating with fellow members and contributing to the confidential monthly revenue reporting that powers the Index. Benchmarking our performance against regional and national peers provides us with valuable operational insight while supporting a broader understanding of Tampa’s economic trajectory.”

Thomas Harblin, Partner at the Florida Private Company Index, added, “Our prior work with the Dow Index team underscored the value of indexes in guiding investor sentiment and market analysis. The FPCI applies that same discipline to the private sector, offering investors and analysts access to real, top-line performance data from Florida’s private business community.”

Stephen H. Watkins, CEO of Entrex, commented, “The Florida Private Company Index enables us to track and benchmark revenue—the top-line indicator of business performance—across the state and nation. While it begins as a regional economic barometer, we expect it to evolve into a diversified, fixed-income fund and eventually into a publicly tradable index that reflects the economic engine of private enterprise.”

About EPPCo:

EPPCo delivers scalable mobile EV charging infrastructure to meet growing demand from regional rental car providers and alternative EV users. Designed to overcome temporary and long-term electric grid limitations, each EPPCo mobile unit features four Level 3 fast chargers and operates across a national network of contracted facilities. The company’s mission is to accelerate EV adoption by providing flexible, off-grid charging solutions where traditional infrastructure falls short.
